

Hafeez Contractor

The architect and master planner
of Nahar's Amrit Shakti

Architecturally speaking what we had was a vast land with inclining contours. By engaging some of the best landscaping consultants from across the world we converted this landscaping challenge to our advantage by creating different levels of a podium spread over 9.5 lac sq.ft. (which I believe is one of the largest in the country). While planning we had to envisage and provide for movements of over three to five thousand people during peak hours. These were not just residents of our township but also belonging to surrounding residential zones. To meet this challenge we took assistance from world renowned traffic consultants who meticulously planned multiple entry and exit points. Lastly, retaining the natural environment and yet creating a township that meets global standards was part of the strict mandate and to do so we had to sacrifice certain premium spaces. Today, as one ambles at Nahar's Amrit Shakti, one experiences the true essence of nature – its rarity makes it a luxury!

Nahar's Amrit Shakti has come a long way and at every stage the project has evolved. Improvisations have been a hallmark right through and while the R12 Sector is nearing completion which is close to perfection, we've already begun brainstorming about the improvisations desired in the next sector. I attribute this solely to the fact that's beautifully encapsulated in the Group's two-word baseline – Experience Excellence. ”
